

Streamlining the Approval Process

Getting designs approved is one of the top challenges engineers face in site development.

Causeway works closely with approving authorities across the UK and Ireland with many of them using Causeway's software for their own checking and auditing of designs.

100+

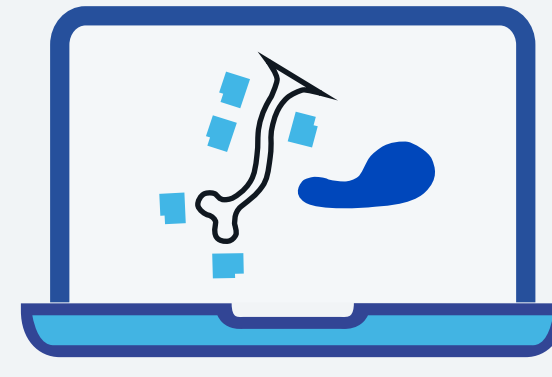

Approving authorities use Causeway's software for checking and auditing designs.

SOFTWARE DESIGNED TO STREAMLINE THE APPROVAL PROCESS

Our design software helps improve communication and design auditing between stakeholders to ensure the approval process is made as simple, efficient, and timely as possible.

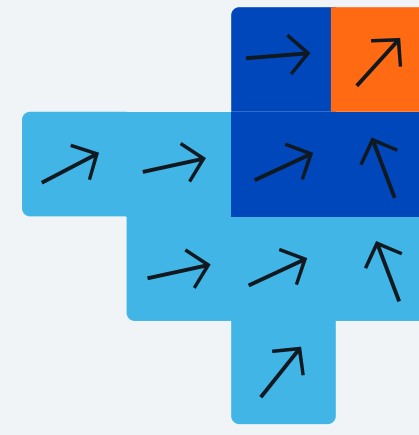

Quickly produce an **outline design** to improve pre-site planning and maximise land use. Assess natural catchment and blue/green corridors.

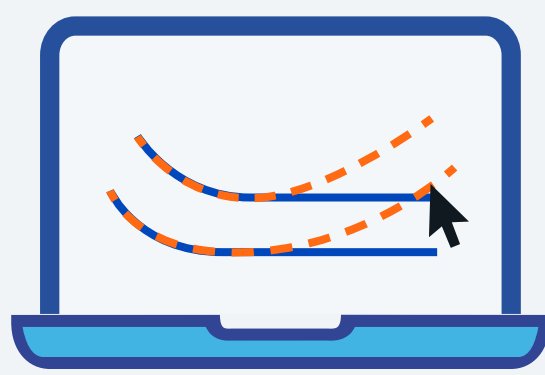

Utilise advanced visualisation technology for live visual representation of any network. **Non-technical visuals are easily interpreted by all stakeholders.**

Check and audit the hydraulic performance of any design against the latest UK requirements.

Colour code overland flow to **better communicate flood risk.**

Efficiently respond to design changes **without having to double handle data.**

Use **overland analysis** to demonstrate if the flooding can be contained or affect vital infrastructure.

Here are just some of the approving authorities Causeway works with.

If you're an approving authority, we can help with your design submission process. **Get in touch.**

Streamline design and approval with Causeway's design solutions.
